ABOUT ME

Senior Backend Developer with 6+ years of proven expertise in Golang, microservices architecture, and cloud-native infrastructure. Specialized in agentic AI development—designing, building, and deploying intelligent AI agents for autonomous operations and intelligent automation. Strong background in performance optimization, distributed systems design, and scalable data pipelines. Committed to delivering high-impact backend solutions that drive business value and technological excellence.

WORK EXPERIENCE

Back End Developer

10/2024 – NOW

TechX Vietnam Co.,Ltd

PROJECT:

FlowX & Easier – AI Sales Intelligence & Multi-Platform Ads Platform

- **Description:** Architected and scaled two production SaaS platforms handling high-throughput data pipelines and real-time analytics.
- **Responsibilities:**
 - Built distributed web crawling pipeline processing 50K+ company profiles.
 - Optimized **ClickHouse** analytics layer, cutting resource overhead by 80% via compatible strategy, materialized views and time-series partitioning—sustained <2s p99 reporting latency.
 - Integrated **Generative AI** for automated lead quality scoring from call transcripts and customer interactions, improving sales team efficiency by 40%.
 - Implemented OAuth2/OIDC with Google Calendar and Mail API integrations for automated sales workflows and in-app telephony with call recording tied to customer profiles.
- **Tech Stack:** Golang, GraphQL, NATS JetStream, PostgreSQL, OpenSearch, ClickHouse, AWS EKS/S3, Generative AI

Backend Developer

04/2022 – 10/2024

Treehouse Labs

PROJECT:

Hyperion & Pulse TRHX – Cryptocurrency Market Intelligence Platform

- **Description:** Architected and scaled distributed data platform processing real-time blockchain and DeFi market data for investment decision-making.
- **Responsibility:**
 - Optimized ETL pipelines and database schemas, reducing data ingestion latency by 60% and improving query performance by 55% across cryptocurrency market feeds
 - Designed and implemented microservices-based backend infrastructure, enhancing system modularity and

scalability

- Optimized database queries and schemas, reducing latency and improving overall system performance
- Collaborated with Frontend and QA teams to design and implement robust APIs
- Worked with DevOps to automatically deploy containerized microservices on Kubernetes across GCP with GitLab CI/ArgoCD, achieving 99.95% uptime
- **Tech Stack:** Golang, Docker, Kubernetes, Google Cloud Platform, ELK Stack, MongoDB, HashiCorp Vault, Apache Kafka/Pulsar, Ghost, Brevo

Developer

07/2020 – 04/2022

Orient Commercial Joint Stock Bank | OCB

PROJECT:

Card Core TECH

- **Description:** A place that handles operations for Card such as Details, Card Management, Alert
- **Responsibility:**
 - Developed a secure user authentication and authorization system, enhancing user trust and security breaches
 - Implemented automated testing for backend code, reducing bugs by 25% and improving the reliability of the application.
 - Designed and developed a RESTful API, improving the efficiency of data exchange between frontend and backend systems and enhancing user experience.
 - Implemented a caching strategy for frequently accessed data, reducing database load by 30% and improving application performance.
- **TechStack:** Golang, React, Jenkins, Docker, K8S, LDAP, Way4 Card

EDUCATION

University Information of Technology

09/2016 – 09/2020

Computer Science

SKILL

Core skills

Golang (5 years) PostgreSQL (4 years) CI/CD (3 years) Docker (3 years)

Jenkins (3 years) Kubernetes (3 years) MongoDB (3 years) Oracle (3 years)

Python (3 years) Redis (3 years) SQL (3 years) AWS (2 years)

GraphQL (2 years) Rust (1 year) Google Cloud (< 1 year)

FOREIGN LANGUAGE

English (Intermediate)

HIGHLIGHT PROJECT

Rust Hexagonal Boilerplate

12/2025 – NOW

[View project](#)

Architected a production-grade Rust web service boilerplate using Hexagonal Architecture within a Cargo

Workspace monorepo, enforcing strict separation between domain logic and infrastructure.

Tech Stack: Axum + Tokio, NATS, SeaORM + PostgreSQL, OpenTelemetry, Grafana, Prometheus, Tempo, and Loki.

Impact: Established a reusable architectural blueprint enabling rapid, consistent backend service development with production-grade observability and clean code boundaries.

GraphQL Federation in Go

06/2025 – 12/2025

[View project](#)

Architected a GraphQL Federation Gateway in Go that aggregates multiple sub-graphs (Gateway, Account, Catalog) into a unified API through dynamic schema composition and intelligent query routing.

Tech Stack: Go, Ent ORM + PostgreSQL, NATS, Redis, Prometheus, OpenTelemetry

Impact: Streamlined multi-service integration while reducing API complexity and improving query performance through intelligent caching.

Shopping

10/2023 – 02/2024

[View project](#)

Architected a microservices e-commerce platform in Go with event-driven architecture, featuring four independent bounded contexts (Customer, Product, Payment, Order) communicating through asynchronous event streams and unified gRPC/REST APIs.

Tech Stack: Go, gRPC + grpc-gateway, PostgreSQL, NATS JetStream, Docker

Impact: Demonstrated advanced distributed systems design with loose coupling between services, enabling independent scaling and deployment while maintaining data consistency through event-driven workflows.
