ABOUT ME

Senior Backend Developer with 6+ years of proven expertise in Golang, microservices architecture, and cloud-native infrastructure. Specialized in agentic AI development—designing, building, and deploying intelligent AI agents for autonomous operations and intelligent automation. Strong background in performance optimization, distributed systems design, and scalable data pipelines. Committed to delivering high-impact backend solutions that drive business value and technological excellence.

WORK EXPERIENCE

Back End Developer 10/2024 – Present
TechX Vietnam Co., Ltd

Project: FlowX & Easier – AI Sales Intelligence & Multi-Platform Ads Platform

Architected and scaled two production SaaS platforms handling high-throughput data pipelines and real-time analytics.

- Built distributed web crawling pipeline processing 50K+ company profiles.
- Optimized ClickHouse analytics layer, cutting resource overhead by 80% via materialized views and time-series partitioning—sustained <2s p99 reporting latency.
- Integrated Generative AI for automated lead quality scoring from call transcripts, improving sales efficiency by 40%.
- Implemented OAuth2/OIDC with Google Calendar and Mail API integrations for automated sales workflows and in-app telephony.

Tech Stack: Golang, GraphQL, NATS JetStream, PostgreSQL, OpenSearch, ClickHouse, AWS EKS/S3, Generative AI

Backend Developer 04/2022 – 10/2024
Treehouse Labs

Project: Hyperion & Pulse TRHX – Cryptocurrency Market Intelligence Platform

Architected and scaled distributed data platform processing real-time blockchain and DeFi market data for investment decision-making.

- Optimized ETL pipelines and database schemas, reducing data ingestion latency by 60% and improving query performance by 55%.
- Designed microservices-based backend infrastructure, enhancing system modularity and scalability.
- Deployed containerized microservices on Kubernetes across GCP with GitLab CI/ArgoCD, achieving 99.95% uptime.
- Collaborated with Frontend and QA teams to design and implement robust APIs.

Tech Stack: Golang, Docker, Kubernetes, Google Cloud Platform, ELK Stack, MongoDB, HashiCorp Vault, Apache Kafka/Pulsar, Ghost, Brevo

Developer 07/2020 – 04/2022
Orient Commercial Joint Stock Bank | OCB

Project: Card Core TECH

Handles operations for Card management including Details, Card Management, and Alerts.

- Developed secure user authentication and authorization system, enhancing user trust.
- Implemented automated testing for backend code, reducing bugs by 25%.
- Designed and developed a RESTful API, improving data exchange efficiency between frontend and backend.
- Implemented caching strategy for frequently accessed data, reducing database load by 30%.

Tech Stack: Golang, React, Jenkins, Docker, K8S, LDAP, Way4 Card

EDUCATION

University of Information Technology 09/2016 – 09/2020
Computer Science

SKILLS

Languages	Golang · Python · Rust · SQL · GraphQL
Databases	PostgreSQL · MongoDB · Oracle · Redis
DevOps & Cloud	Docker · Kubernetes · Jenkins · CI/CD · AWS · Google Cloud
Foreign Language	English – Intermediate

HIGHLIGHT PROJECTS

Natural Language SQL Agent

05/2026 - 06/2026

[View Source](#)

Production-structured Python agent that converts natural language questions into SQL queries and returns human-readable answers, implementing a ReAct-style tool-calling loop with read-only SQL enforcement.

Tech: Python, OpenRouter API, SQLAlchemy (async), Pydantic, pytest

Impact: Demonstrated agentic AI design with safety-first query validation, blocking all mutation operations and supporting interactive REPL and single-shot CLI modes.

GraphQL Federation in Go

06/2025 - 12/2025

[View Source](#)

GraphQL Federation Gateway in Go aggregating multiple sub-graphs (Gateway, Account, Catalog) into a unified API through dynamic schema composition and intelligent query routing.

Tech: Go, Ent ORM + PostgreSQL, NATS, Redis, Prometheus, OpenTelemetry

Impact: Streamlined multi-service integration while reducing API complexity and improving query performance through intelligent caching.

Pizza Hub – DevOps / GitOps Pipeline

01/2026 - 04/2026

[View Source](#)

End-to-end CI/CD pipeline deploying a Go REST API to Kubernetes on AWS, with GitHub Actions for build/test/push, Terraform for IaC provisioning, and ArgoCD for GitOps-driven multi-environment delivery.

Tech: Go, Docker, GitHub Actions, Terraform, Kubernetes/EKS, Helm, Kustomize, ArgoCD, Prometheus

Impact: Delivered a production-ready reference architecture covering the full DevOps lifecycle—from automated testing and multi-stage image builds to HPA, secret management, and observability readiness.

CERTIFICATES

Terraform Associate 003

Udemy · 02/2025

KCNA – Kubernetes and Cloud Native Associate

KodeKloud · 11/2023
